Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-i: COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

-!- COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

-!- PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF DIBENZOTHIOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTHRENE TO 1-HYDROXY-2-WAPTHOIC ACID AND THE METABOLISM OF DET IS LIMITED TO OXIDATION OF THE AROMATIC RING.

-!- SUBUNIT: NAPHTHALENE DIOXYGENASE (MO) MULTICOMPONENT ENZYME SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT IS COMPOSED OF FREEDOXIN REDUCTASE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS COMPOSED OF AN HEXAMER OF THREE LARGE ALPHA SUBUNITS (NDOB) AND THREE SMALL BETA SUBUNITS (NDOC).

-!- SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This SWISS-PROT entry is copyright. COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES

CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF

DIBENZOTHIOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTHREN

1-HYDROXY-2-NAPTHOLC ACID AND THE METABOLISM OF DBT IS LIMITE

OXIDATION OF THE AROMATIC RING.

SUBUNIT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        361
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NAPHTHALENE DIHYDRODIOL.

NAPHTHALENE DIHYDRODIOL.

CATALYTIC ACTIVITY: Naphthalene + NADH + O(2) = (1R,2S)-1,2 dihydronaphthalene-1,2-diol + NAD(+).

COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF DIBENZOTHIOPHENE (DBT) AND PHENANTHENE. CONVERTS PHENANTHI 1-HYDROXY-2-NAPTHOIC ACID AND THE METABOLISM OF DBT IS LIMIOXIDATION OF THE AROMATIC RING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (NDOC).
SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: NAPHTHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF FERREDOXIN REDUCTASE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS COMPOSED OF A LARGE ALPHA SUBUNIT (NDOB) AND A SMALL BETA SUBUNIT

CC -I- FUNCTION: PART OF MULTICOMPONENT 3-PHENYLPROPIONATE DIOXYGENASE.

CC CONVERTS 3-PHENYLPROPIONIC ACID (PP) INTO CIS-3-(3-CARBOXYETHYL)-

CC -I- FUNCTION: PART OF MULTICOMPONENT 3-PHENYLPROPIOLO.

CC -I- CYPLOHEXADIENE-1, 2-DIOL (PP-DINYDRODIOL).

CC -I- CYPLOHEXADIENE-1, 2-DIOL (PP-DINYDRODIOL).

CC -I- COPACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.

-I- PATHWAY: 3-PHENYLPROPIONIC acid catabolism.

CC -I- SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF FOUR PROTEINS: THE

TWO SUBUNITS: OF THE HYDROXYLASE COMPONENT (HCAE AND HCAF). A

FERREDOXIN (HCAC) AND A FERREDOXIN REDUCTASE (HCAD).

C-I- SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING

DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                             entities

SUBUNIT: Heterohexamer consisting of 3 BphAl subunits and 3 BphA2 subunits. A ferredoxin (BphA3) and a ferredoxin reductase (BphA4) must be present to obtain activity (By similarity).
SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Chem. Biophys. Res. Commun. 202:850-856(1994).
CATALYTIC ACTIVITY: Biphenyl + NADH + O(2) = (2R, phenylcyclohexa-3,5-diene-1,2-diol + NAD(+).
COFACTOR: Binds 1 2Fe-2S cluster and 1 iron atom
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  similarity)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the Acinetobacter calcoaceticus chromosomal bend gene are the short-chain alcohol dehydrogenase superfamily.";
I. J. Biochem. 204:113-120(1992).
COFACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM.
PATHWAY: DEGRADATION OF BENZOATE AND TOLUATE TO CATECHOL.
SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF THREE PROTEIL
TWO SUBUNITS OF THE HYDROXYLASE COMPONENT (XYLX AND XYLY)
ELECTRON TRANSFER COMPONENT (XYLZ).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING DIOXYGENASE ALPHA SUBUNIT FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S23482; S23482.

benzene 1,2-dioxygenase (EC 1.14.12.3) terminal oxygenase component large chain - Pseudo C; Species: Pseudomonas putida C; Date: 19-May-1994 #sequence_revision 06-Jan-1995 #text_change 21-Jul-2000 C; Accession: JN0812 R; Tan, H.M.; Tang, H.Y.; Joannou, C.L.; Abdel-Wahab, N.H.; Mason, J.R. Gene 130, 33-39, 1993
A; Title: The Pseudomonas putida ML2 plasmid-encoded genes for benzene dioxygenase are un A; Reference number: JN0810; MUID:93345820; PMID:8344526
A; Residues: 1.450 <TAN>
A; Residues: 1-450 <TAN>
A; Residues: 1-450 <TAN>
A; Residues: 1-450 <TAN>
A; Experimental source: strain ML2
C; Comment: This enzyme is involved in catalyzing the oxidation of benzene to cis-1,2-dil-C; Comment: The reduced enzyme catalyzes the oxidation of benzene to cis-benzene dihydrod A; Genetics:
A; Gene: bedC1
A; Genome: plasmid
C; Superfamily: toluene dioxygenase terminal oxygenase component large chain; Rieske [2Fe C; Reyvords: ZFe-25; aromatic hydrocarbon catabolism; metalloprotein; oxidoreductase; Rie F; 96, 98, 116, 119/Binding site: ZFe-25 cluster (Cys, His, Cys, His) (covalent) #status pre
